

Soft Starter Solutions for the Foundry and Steel Making Industry

For over 40 years, SAF has had a leading role in the supply of heavy duty solid state soft starters installed in some of the harshest applications found in the industry. From coal yard conveyors and crushers, to shakers, pumps and compressors, SAF has provided soft starter solutions that reduce down time and lower overhead costs for the industry.

SAF's soft starters offer accurate overload protection, key equipment monitoring and high torque surge protection capabilities for electrical and mechanical equipment. Reduced torque starting helps lower maintenance costs of motors and their driven equipment while lowering costly peak in rush current on startup.

Proven in the field, SAF OPAL and OPAL PRO series starters are easily implemented and offer valuable site control information empowering personnel to monitor and extend the life of your equipment.

Industry applications experience includes:

- Belt and Chain Conveyors
- Crushers and Grinders (Slag)
- Compressors
- Wound Rotor Motors
- Hydraulic Power Unit Pumps
- Tank Agitators
- Cooling Pumps
- Blowers
