

Soft Starter Solutions for the Power Generation Industry

When soft starters were first introduced, many in the power generation industry recognized the significant value solid state soft starters could bring to their production. For decades, soft starters have played a prominent roll in controlling motors throughout the power generation industry.

Through a wide range of motor applications, including crushers, pulverizers, pumps, fans and conveyors, SAF continues to supply robust soft starter solutions into some of North America's prominent power generating facilities.

The OPAL and OPAL PRO's industry leading, reduced voltage soft starters, available with integrated solid state reversing and integrated DC Injection options, offer excellent solutions for the power generation industry. Onboard current and overload monitoring offers real time feedback for monitoring of critical power plant applications.

Common Power Plant Applications Include:

- Feed Conveyors
- Bucket Wheels (Stacker Reclaimer)
- Crushers and Pulverizers
- Draft Fans
- Feed Pumps
- Condensate Pumps
- Circulating Pumps
- Ventilation Fans
