

Soft Starter Solutions for the Mining, Aggregate, Cement and Concrete Industries

For over 40 years, SAF has had a leading role in the supply of heavy duty solid state soft starters installed in some of the harshest applications found in the industry. From coal yard conveyors to jaw and cone crushers, slurry pumps and shakers, SAF has provided soft starter solutions that reduce down time and lower overhead costs for the industry.

SAF's soft starters offer accurate overload protection, key equipment monitoring and high torque surge protection capabilities for electrical and mechanical equipment. Reduced torque starting helps lower maintenance costs of motors and their driven equipment while lowering costly peak in rush current on startup.

Proven in the field, regardless if the power supply is from the grid or site generator, SAF OPAL and OPAL PRO series starters are easily implemented and offer valuable site control information empowering personnel to monitor and extend the life of your equipment.

Industry applications experience includes:

- Belt Conveyors and Feed Augers
- Jaw and Cone Crushers
- Grinding and Ball Mill Applications
- Slurry Pumps
- Screening Equipment
- Hydraulic Pumps
- Compressors
