

## Customized Soft Starter and Current Regulating Solutions

For over 40 years, SAF has had a leading manufacturer in the supply of thyristor based controlled power regulators. SAF products operate in all major manufacturing sectors of the North American market. Our products range from small thyristor based soft starter controls to large resistive or inductive load regulators.

For decades, SAF has been supplying some of North America's largest control equipment manufacturers with high quality robust products helping complete their control product offerings.

Our inhouse design staff has the technical expertise in soft starter and thyristor control to customize your solution for the application and environment you need.

If your organization has an application you feel would benefit from thyristor based controls, let one of our technical personnel know and we would be happy to discuss your application needs.

SAF offers fully regulated solid state regulators used for soft starting single phase and three phase motors, including solid state reversing soft starters and soft starters with integrated electric brakes. SAF products include resistive heater controllers, motor test stands, DC drives and large current regulated power supplies.

Industry application experience includes:

- Mining & Aggregate
- Forestry
- Agriculture
- Marine
- Food and Beverage
- Primary and Secondary Steel
- Forges & Foundries
- Material Handling
- Rubber and Polymer
- Oil and Gas
- Water and Wastewater
- Recycling
- Power Generation
- Pulp and Paper
- Ski Hills and Snow Making
- HVAC and Refrigeration
