

## Soft Starter Solutions for Agricultural Applications

Since 1976, SAF has been a key player in the supply of heavy-duty motor drive controls for the North American market. Today, soft starters play a key role in powering motors in various agricultural applications all over the continent.

SAF's unique solid state full torque reversing soft starter configuration allows agricultural and feed manufacturing facilities to back their equipment out of a jam with the simple touch of a button, or reverse out automatically with the output signal of a PLC.

SAF's robust soft starter designs offer accurate overload protection, current monitoring and high torque surge protection capabilities for electrical and mechanical equipment. Reduced torque starting helps lower maintenance costs of motors and their driven equipment while lowering costly peak power draw on start up.

Proven for decades in the agricultural industry, SAF's starters continue to perform dependably. Regardless of the application you are installing a SAF soft starter for, SAF's OPAL and OPAL PRO series starters are easily implemented and are built to withstand demanding agricultural applications for decades to come.

Agricultural applications experience includes:

- Pivot and deep well pumps
- Field Irrigation Pumps
- Feed Augers
- Mixers
- Feed Conveyors
- Dryers
- Extraction Presses
- Hydraulic Pumps
- Compressors
- Ventilation Fans
- Grinders and Shredders
- Pelletizer Mills
- Extruders
- Bucket Elevators
